5.2 Java Reference

```
/* Java reference :
   References on Java IO, Structures, etc.
*/
import java.io.*;
import java.lang.*;
import java.math.*;
import java.util.*;
/* Regular usage:
   Slower IO :
   Scanner in = new Scanner (System.in));
   Scanner in = new Scanner (new BufferedInputStream (System.in));
   Input :
       in.nextInt () / in.nextBigInteger () / in.nextBigDecimal () / in.nextDouble ()
       in.nextLine () / in.hasNext ()
   Output :
       System.out.print (...);
       System.out.println (...);
       System.out.printf (...);
   Faster IO :
   Shown below.
   BigInteger :
   BigInteger.valueOf (int) : convert to BigInteger.
   abs / negate () / max / min / add / subtract / multiply /
   divide / remainder (BigInteger) : BigInteger algebraic.
   gcd (BigInteger) / modInverse (BigInteger mod) /
   modPow (BigInteger ex, BigInteger mod) / pow (int ex) : Number Theory.
   not () / and / or / xor (BigInteger) / shiftLeft / shiftRight (int) : Bit operation.
   compareTo (BigInteger) : comparison.
   intValue () / longValue () / toString (int radix) : converts to other types.
   isProbablePrime (int certainty) / nextProbablePrime () : checks primitive.
   BigDecimal :
   consists of a BigInteger value and a scale.
   The scale is the number of digits to the right of the decimal point.
   divide (BigDecimal) : exact divide.
   divide (BigDecimal, int scale, RoundingMode roundingMode) :
       divide with roundingMode, which may be:
       CEILING / DOWN / FLOOR / HALF_DOWN / HALF_EVEN / HALF_UP / UNNECESSARY / UP.
   BigDecimal setScale (int newScale, RoundingMode roundingMode) :
       returns a BigDecimal with newScale.
```

```

    doubleValue () / toString () : converts to other types.
Arrays :
    Arrays.sort (T [] a);
    Arrays.sort (T [] a, int fromIndex, int toIndex);
    Arrays.sort (T [] a, int fromIndex, int toIndex, Comparator <? super T> comparator);
LinkedList <E> :
    addFirst / addLast (E) / getFirst / getLast / removeFirst / removeLast () :
        deque implementation.
    clear () / add (int, E) / remove (int) : clear, add & remove.
    size () / contains / removeFirstOccurrence / removeLastOccurrence (E) :
        deque methods.
    ListIterator <E> listIterator (int index) : returns an iterator :
        E next / previous () : accesses and iterates.
        hasNext / hasPrevious () : checks availability.
        nextIndex / previousIndex () : returns the index of a subsequent call.
        add / set (E) / remove () : changes element.
PriorityQueue <E> (int initcap, Comparator <? super E> comparator) :
    add (E) / clear () / iterator () / peek () / poll () / size () :
        priority queue implementations.
TreeMap <K, V> (Comparator <? super K> comparator) :
    Map.Entry <K, V> ceilingEntry / floorEntry / higherEntry / lowerEntry (K):
        getKey / getValue () / setValue (V) : entries.
    clear () / put (K, V) / get (K) / remove (K) : basic operation.
    size () : size.
StringBuilder :
    Mutable string.
    StringBuilder (string) : generates a builder.
    append (int, string, ...) / insert (int offset, ...) : adds objects.
    charAt (int) / setCharAt (int, char) : accesses a char.
    delete (int, int) : removes a substring.
    reverse () : reverses itself.
    length () : returns the length.
    toString () : converts to string.
String :
    Immutable string.
    String.format (String, ...) : formats a string. i.e. sprintf.
    toLowerCase / toUpperCase () : changes the case of letters.
*/
/* Examples on Comparator :
public class Main {
    public static class Point {
        public int x;
        public int y;
        public Point () {
            x = 0;
            y = 0;
        }
        public Point (int xx, int yy) {
            x = xx;
            y = yy;
        }
    };
    public static class Cmp implements Comparator <Point> {
        public int compare (Point a, Point b) {
            if (a.x < b.x) return -1;

                if (a.y == b.y) return 0;
            }
            return 1;
        }
    };
    public static void main (String [] args) {
        Cmp c = new Cmp ();
        TreeMap <Point, Point> t = new TreeMap <Point, Point> (c);
        return;
    }
};
*/
/* Another way to implement is to use Comparable.
However, equalTo and hashCode must be rewritten.
Otherwise, containers may fail and give strange answers.
Example :
public static class Point implements Comparable <Point> {
    public int x;
    public int y;
    public Point () {
        x = 0;
        y = 0;
    }
    public Point (int xx, int yy) {
        x = xx;
        y = yy;
    }
    public int compareTo (Point p) {
        if (x < p.x) return -1;
        if (x == p.x) {
            if (y < p.y) return -1;
            if (y == p.y) return 0;
        }
        return 1;
    }
    public boolean equalTo (Point p) {
        return (x == p.x && y == p.y);
    }
    public int hashCode () {
        return x + y;
    }
};
*/
//Faster IO :
public class Main {
    static class InputReader {

```

```

public BufferedReader reader;
public StringTokenizer tokenizer;
public InputReader (InputStream stream) {
    reader = new BufferedReader (new InputStreamReader (stream), 32768);

4	.* ->*	Pointer-to-member	
5	a*b a/b a%b	Multiplication, division, and remainder	Left-to-right
6	a+b a-b	Addition and subtraction	
7	<< >>	Bitwise left shift and right shift	
8	< <= > >=	For relational operators < and ≤ respectively For relational operators > and ≥ respectively	
9	== !=	For relational operators = and ≠ respectively	
10	a&b	Bitwise AND	
11	^	Bitwise XOR (exclusive or)	
12		Bitwise OR (inclusive or)	
13	&&	Logical AND	
14		Logical OR	
15	a?b:c throw = += -= *= /= %= <<= >>= &= ^= =	Ternary conditional throw operator Direct assignment Compound assignment by arithmetic operation Compound assignment by bitwise shift Compound assignment by bitwise AND, XOR, and OR	Right-to-left
16	,	Comma	Left-to-right

5.4 Hacks

```

/* Hacks :
   unusual codes that may help in contests.

```

```

*/
// long long formatting hack :
#ifdef WIN32
#define LL "%I64d"
#else
#define LL "%lld"
#endif
// Optimizing hack :
#pragma GCC optimize ("O3")
#pragma GCC optimize ("whole-program")
// Stack hack :
// C++
#pragma comment(linker, "/STACK:36777216")
// G++
int __size__ = 256 << 20; // 256MB
char *__p__ = (char*)malloc(__size__) + __size__;
__asm__ ("movl_0,_%esp\n" :: "r" (__p__));

```
